PROJECT DETAILS

Program Management and Project Management services are being provided for the development, design and construction of a new food waste to energy facility being constructed in Portland, OR. This facility will utilize food waste to generate renewable natural gas for pipeline injection. IPC played a significant role in the cost control and value engineering efforts aimed at developing a quality project at the lowest possible capital cost.

SERVICES PROVIDED

- Program Management
- Project Development / Design Development
- Cost Control
- Budgeting, Estimating, Scheduling
- EPC Contract Negotiations
- Procurement for Owner-Procured Equipment
